1. Introduction

1.1 Purpose

The purpose of this Policy is to ensure the appropriate governance for the use of artificial intelligence software utilities (AI Utilities) within the Forcepoint group of companies (“Forcepoint”). We strive to ensure compliance with ethical, legal, and regulatory requirements, while leveraging the power of AI Utilities. This document is not intended to replace or otherwise conflict with the other company policies or any applicable Forcepoint legal agreements.

1.2 Scope

This Policy applies to all employees, contractors, and affiliated Personnel involved in the procurement, development, deployment, or use of AI Utilities, services, features, or software within Forcepoint. It applies to all AI-related initiatives, whether experimental, operational, or customer-facing, to ensure alignment with our requirements for security, compliance, innovation, and ethical use. Adherence to this Policy is mandatory before engaging with any AI Utilities, regardless of platform or purpose.

1.3 Authority

The Chief Information Officer and Chief Legal Officer, in coordination with Legal Compliance and the Data Protection Officer, have direct responsibility for maintaining this Policy and providing advice and guidance on its implementation and ensuring adherence. [NOTE: repetitive to 1.4.1]

1.4 Responsibility

- 1.4.1 All Personnel must familiarize themselves with this Policy and fully adhere to its requirements.
- 1.4.2 Before using AI Utilities, Personnel must ensure that the AI Utility and proposed use case has been reviewed and approved by the AI Council, and that all access and use requirements established by the AI Council are met. This applies, but is not limited to, the following use case scenarios:
 - 1.4.2.1 Proof of concept (“POC”) testing of an AI Utility (e.g., as part of a Request for Proposal (“RFP”) or similar exercise).
 - 1.4.2.2 Onboarding a new AI Utility vendor or vendor providing AI Utility functionality or features. Onboarding of new vendors must also follow Procurement’s vendor onboarding procedures and processes.
 - 1.4.2.3 When a business function team becomes aware of a new AI Utility function/feature that will be available for use within an existing vendor service.
- 1.4.3 Business function teams planning to develop AI must ensure they have obtained approval from the company’s AI Council before deployment of any internally developed artificial intelligence.

1.5 Definitions

Term / Acronym	Definition
AI Council	Internal cross-functional governance body responsible for overseeing the strategic, ethical, and compliant use of AI across the organization. The council reviews AI initiatives, approves tools, and ensures alignment with company requirements, values, and regulations.
AI Registry	A centralized database that records all AI Requests for AI tools, models, services, and projects in use within the organization. It supports transparency, risk management, and compliance by maintaining records of AI usage and ownership.
Artificial Intelligence (“AI”)	Systems capable of performing tasks that typically require human intelligence, such as learning, reasoning, problem-solving, perception, and language understanding. Note: Machine Learning (ML) is considered and included as a subset of Artificial Intelligence.
AI Utilities	Tools, services, or platforms that use artificial intelligence, such as machine learning, natural language processing, or generative AI to automate tasks or generate outputs like content, recommendations, or analysis based on user input. They may operate independently or be embedded within broader applications.
Authorized Use	Use of AI Utilities as approved by the AI Council, and in compliance with this Policy.
Forcepoint Systems	Forcepoint approved networks, platforms, or tools provided to Personnel for business purposes.
Personnel	All people conducting work on behalf of Forcepoint, including but not limited to employees, consultants, contractors, and authorized third-party vendors with access to Forcepoint Systems.
Prohibited Activities	Actions involving AI that are explicitly forbidden under this AI policy, such as unauthorized data processing, use of unvetted AI Utilities or unauthorized deployment of AI in high-risk or unethical scenarios.
Protected Information	Forcepoint Confidential, Proprietary, or Private information and any source code, personal/PII, customer, or employee data.
Software	Computer-executable code and related components that perform specific functions or tasks. This includes applications, systems, scripts, and embedded code, whether developed internally or acquired externally.

1.6 Applicability

This Policy applies to all Personnel conducting work for Forcepoint. Applicable individuals shall ensure any consultants, independent contractors, and third- party vendors who have access to or will utilize Forcepoint approved AI Utilities in the course of performing company duties are made aware of, and adhere to, this Policy.

2. Policy Overview

2.1 Use of AI

- 2.1.1 Forcepoint acknowledges the advantages of integrating AI Utilities within the enterprise. Forcepoint also recognizes the associated risks and ethical considerations that come with AI Utility use. Therefore, this Policy is established to ensure the responsible and ethical use of AI Utilities within Forcepoint.
- 2.1.2 Key objectives of this Policy include the following:
 - 2.1.2.1 Protect the confidentiality, integrity, and availability of data owned or held by Forcepoint, including but not limited to Protected Information.
 - 2.1.2.2 Preserve and protect Forcepoint proprietary intellectual property.
 - 2.1.2.3 Ensure the fair and equitable use of AI Utilities at Forcepoint.
 - 2.1.2.4 Ensure that Forcepoint's use of AI Utilities does not infringe or result in the infringement of a third party's proprietary or intellectual property rights.
 - 2.1.2.5 Ensure that Forcepoint's use of AI Utilities complies with applicable legal and contractual obligations.

2.2 Policy Program Oversight – AI Council

- 2.2.1 This Policy establishes the AI Council, which is responsible for reviewing and providing recommendations to Forcepoint leadership regarding the use of AI Utilities within Forcepoint.
- 2.2.2 The AI Council is composed of a senior representative from Legal, Product/Engineering, Human Resources, Information Security, and Information Technology. The AI Council may also include additional senior representatives from other business functions who are appointed by the Executive Sponsor(s) of the AI Council.
- 2.2.3 As part of their responsibilities, the AI Council will assess and approve or prohibit requests for AI Utilities or internal AI development requests. In reviewing AI Utilities or internal AI development requests, the AI Council will be guided by the following objectives:
 - 2.2.3.1 Transparency

All AI Utilities must be transparent in their operation and outcomes. This includes ensuring that users are aware of the use of AI Utilities and have received clear and concise documentation that explains how they operate.
 - 2.2.3.2 Accountability

The development and deployment of AI Utilities must be accountable to the public, customers, and regulators. This includes ensuring that AI Utilities comply with all relevant laws, regulations, and ethical principles.

2.2.3.3 Ethical Considerations

The use of AI Utilities must comply with ethical considerations, including but not limited to, privacy, and the exclusion of bias and discrimination. The development of AI Utilities must be guided by ethical principles and practices that promote fairness, transparency, and accountability.

2.2.3.4 Risk Management

The use of AI Utilities must include appropriate risk-management measures to ensure that risks are identified and mitigated. This includes assessing the potential risks associated with the use of AI Utilities and implementing appropriate controls to help mitigate those risks.

3. Requirements

3.1 Data Privacy and Security

- 3.1.1 The use of AI Utilities and internal AI development initiatives must comply with all applicable privacy and security laws and regulations. This includes ensuring that all personal, financial, and business sensitive information/data is collected and processed in accordance with applicable policies, laws, regulations, and ethical principles.
- 3.1.2 Forcepoint categorizes the use of AI Utilities as follows:
 - Prohibited Use,
 - High-Risk Use, and
 - Approved Use (i.e., uses that are authorized by the AI Council).
- 3.1.3 Before using any AI Utilities or starting internal AI development projects not previously authorized by the AI Council, Personnel must complete and submit a request to the AI Council via the AI Request form available at the AI SharePoint site, [Forcepoint AI Home](#).
- 3.1.4 If the AI Utility or internal development project and proposed use are approved or otherwise permitted by the AI Council, the requester must adhere to the Responsible Use of AI Utilities set forth below in addition to any specific requirements set forth by the AI Council as part of the request approval notification. If the request is not approved or permitted by the AI Council, use of the request is not authorized and may not be used or implemented.
- 3.1.5 The AI Council will maintain the AI Registry, which includes a log of submitted requests, associated information and details provided by the requester, AI Council review information, and AI Council review outcome.
- 3.1.6 Any use or development of AI contrary to this Policy may result in disciplinary action, including termination. Forcepoint reserves the right to review, monitor, and intercept all activities in connection with the use of AI Utilities, including communications shared with AI Utilities (e.g., messages, prompts, attachments, files).

3.2 Prohibited and High-Risk Activities

3.2.1 Prohibited Use of AI Utilities

Unless otherwise specifically approved by the AI Council and recorded in the AI Registry, Forcepoint prohibits the use of AI Utilities or internal AI development. The following is a non-exhaustive list of AI uses that are prohibited by law or ethical best practices:

- 3.2.1.1 In any manner that would infringe or violate Forcepoint's intellectual property rights or the proprietary rights of third parties (e.g., generating images from a protected third-party image).
- 3.2.1.2 To automatically deny or grant a benefit (e.g., to deny credit, approval of financial allocations, or processing of insurance claims).
- 3.2.1.3 For employee-related, automated decision-making (e.g., hiring, work performance, approval of health-related benefits, or termination).
- 3.2.1.4 In an unprofessional or inappropriate manner (including generating unprofessional or inappropriate content) or in a manner that interferes with your employment responsibilities and productivity.
- 3.2.1.5 For discriminatory purposes, including but not limited to race, gender, age, religion or sexual orientation.
- 3.2.1.6 For illegal purposes, including but not limited to fraud, hacking, or any other activity prohibited by law.
- 3.2.1.7 To replace human interaction or decision-making where it is inappropriate or unethical to do so.

3.2.2 High-risk use of AI Utilities

The following activities are currently considered high-risk and will be subjected to enhanced review by the AI Council to help ensure proper security and data protection measures are in place:

- 3.2.2.1 Inputting Protected Information or otherwise allowing unauthorized access to Protected Information, to generate a response. This information may include third-party information subject to non-disclosure or confidentiality agreements and customer or employee personal information.
- 3.2.2.2 Providing access to, or inputting Forcepoint's proprietary Software code into any system, including for the purposes of debugging, generating code comments, or developing use documentation.
- 3.2.2.3 Generating code for integration into Forcepoint's proprietary codebase or software stack without meeting the requirements under section 5 of this Policy.
- 3.2.2.4 Generating material or code for which Forcepoint intends to seek copyright or patent protection without meeting the requirements under section 5 of this Policy.
- 3.2.2.5 Generating and solely relying on advice on legal or compliance matters (or drafting related material) without any additional review and validation from Forcepoint Legal to ensure that there is no inaccurate, bias, or harmful content, and to prevent output that is entirely AI generated from being shared or disseminated without any qualified human verification.

- 3.2.2.6 Using AI Utilities with “agentic” features (i.e., capable of acting autonomously) that are not properly configured and implemented to have the required security, data protection, and permissions in place to prevent inappropriate access to and use of Protected Information or unauthorized company data.
- 3.2.2.7 Any AI use case that is not explicitly categorized under existing high-risk classifications but is determined by the AI Council to present substantial risk shall be subject to the same governance, oversight, and mitigation protocols as formally designated high-risk AI activities.

3.3 Approved Activities

- 3.3.1 Forcepoint authorizes certain uses of AI Utilities and internal AI development initiatives following a review by the AI Council to manage the legal, commercial, and reputational risks. AI Utilities and specific use cases that have been approved by the AI Council as recorded in the AI Registry are considered acceptable and approved uses under this Policy.
- 3.3.2 To assist the company in controlling costs and to reduce our overall security exposure, the AI Council encourages the use of existing, approved AI Utilities and use cases, rather than adding and paying for additional AI Utilities that are viewed as providing redundant capabilities to an already approved AI Utility for the same or similar use cases. AI Council approved AI Utilities and associated use cases can be found here, [Approved AI Utilities](#)

3.4 Responsible Use of AI Utilities

AI Utilities may generate inaccurate and misleading information. AI Utilities may also generate responses by relying on third-party material that is subject to intellectual property rights. For those reasons, Personnel are required to follow the following practices when making **any** use of AI Utilities:

- 3.4.1 Use only company-approved AI Utilities for business purposes, ensuring the security of Forcepoint Protected Information. Personal use of AI utilities on Forcepoint systems is strictly prohibited. The use of public or unapproved AI tools is not permitted unless explicit authorization has been granted by the AI Council in writing.
- 3.4.2 Ensure human oversight and authorship are employed when using AI generated content. All AI-generated outputs must be reviewed and refined by a human before use or distribution. Forcepoint Personnel remain fully accountable for the quality, legality, and ethical standards of any work involving AI. Delegating tasks to AI does not absolve Personnel of responsibility for the final deliverables.
- 3.4.3 Do not put any offensive or abusive language into an AI Utility. All input and output must be professional and respectful when using AI.
- 3.4.4 Always verify the accuracy of anything, including information generated by an AI Utility before using the generated results for any purpose.
- 3.4.5 Human oversight is necessary to verify that outputs are accurate, suitable, and in line with business objectives so that the final product incorporates human judgment and expertise. When asserting any ownership or intellectual property rights to content that contains any AI generated output, Personnel should endeavor to record their involvement in developing or editing AI outputs, including decisions made, context provided, and any changes performed.

4. Internal AI Development

Forcepoint is committed to ensuring that the design, development, and continued use of AI models, mesh, and processing in support of its products and services comply with the requirements under the EU AI Act and other relevant global laws and regulations that govern the use and development of AI. An AI request must be submitted and approved by the AI Council for the internal development of AI to ensure that the resulting AI Utility, model, or system is compliant with our policy and applicable laws and regulations.

4.1 Requirements for Artificial Intelligence Development

The following requirements must be adhered to when developing Artificial Intelligence:

- 4.1.1 Employees must document the use of AI in the creation of work products, including the nature of human contribution and the context of use. This ensures transparency and supports intellectual property protection. The design and development process must be transparent, with clear documentation of the purpose, development process, methodologies, data sources used, a clear understanding of the decision-making processes, performance, security (data, architecture, access), and risk management practices.
- 4.1.2 AI models and systems must be developed and used in accordance with ethical principles, including fairness, equality, non-discrimination, non-bias, and respect for human rights and privacy.
- 4.1.3 Compliance with data privacy laws, such as GDPR, is mandatory. This includes ensuring that personal data is processed lawfully, transparently, and securely.
 - 4.1.3.1 Under GDPR and other global data protection and privacy laws, individuals have the right to opt-out of processing of their personal data, including any AI and other automated decision-making processing.
 - 4.1.3.2 AI developed for Forcepoint products and services must support the ability to act on Data Subject Access Requests (DSARs) from individuals that request their personal data to be deleted, no longer processed, and/or provide a report on the personal data that we may store for an individual.
- 4.1.4 AI models and systems must undergo rigorous assessments to identify and mitigate potential risks. This includes evaluating the impact on privacy, security, and ethical considerations.
- 4.1.5 Forcepoint must ensure accountability in the development and deployment of AI models and systems. This includes establishing clear lines of responsibility and ensuring compliance with legal and regulatory requirements.
- 4.1.6 AI models and systems must be continuously monitored and evaluated to ensure they remain secure and function properly while maintaining compliance with legal, regulatory, and ethical standards.

5. Using AI Utilities for Code Generation

5.1 Protecting Forcepoint's Intellectual Property

It is important to identify the degree of human involvement in the code. The extent of human participation, authorship, and creative input (such as code choices, edits, or modifications) are significant considerations when determining and protecting intellectual property rights related to Forcepoint source code that includes AI-generated components.

5.2 Requirements for use of AI Utilities for Code Generation

The following requirements must be followed when using AI Utilities for code generation:

- 5.2.1 To protect company intellectual property rights to our source code when using AI Utilities to generate code, Personnel must ensure that any content created with generative AI tools includes meaningful human input, such as proprietary knowledge, strategic context, or creative refinement. Outputs should be recorded in a manner that highlights the human creative contributions and the sensitive nature of the inputs, as content generated exclusively by AI may limit available intellectual property protection.
- 5.2.2 All Forcepoint Protected Information, including proprietary source code, must be safeguarded at all times when utilizing AI Utilities to maintain legal protection of the company's intellectual property.
- 5.2.3 Product engineering documentation or records should denote the use of AI-generated code. This notation should provide, at a minimum, a high-level summary of the creativity process by Personnel, including human creative inputs and modifications to AI-generated content, and the prompts that are used (if feasible), the date of generation, name and version of the AI Utility used, and the purpose of the code.
- 5.2.4 AI-generated code must undergo thorough review and validation by software composition analysis (SCA) tools, to scan the code for any vulnerabilities and snippets of open-source and third-party components that may be present in AI generated code, and by human developers to ensure accuracy, functionality, and compliance with Forcepoint's coding standards.

6. Oversight and Monitoring

The use of AI Utilities must be subject to oversight and monitoring to ensure compliance with this Policy and all applicable laws, regulations, and ethical principles. This includes periodic audits, reviews, and assessments to identify any potential risks or issues. Use of AI Utilities to draft articles, policies, blogs, social media posts or other publishable items should include a thorough manual check of all data as part of its workflow to mitigate against any risk of AI errors and inaccuracies.

6.1 Human Review of AI Outputs

All AI-generated content must be reviewed by a qualified employee before use, publication, or integration into Company systems. Human oversight is required to ensure outputs are accurate, appropriate, and aligned with business objectives.

6.2 Responsibility for Outcomes

Any concerns about AI-generated content, including but not limited to bias, inaccuracy, or potential misuse must be promptly reported to the appropriate team (e.g., Legal Compliance or Information Security). Employees are expected to exercise caution and escalate when unsure whether content reflects bias, inaccuracy, or involves potential misuse.

7. Training

Personnel who develop, deploy, or operate AI Utilities on behalf of Forcepoint must receive appropriate training related to responsible AI use, including updates on oversight practices, risk mitigation, and on this Policy and all applicable laws, regulations, and ethical principles.

7.1 Mandatory AI Training

[Security Awareness – Generative AI](#) – A Forcepoint University course required for all employees, consultants, contractors, and third-party service providers who develop, deploy, or operate AI Utilities on behalf of Forcepoint.

7.2 Optional Resources

- [Special Interest Areas and Best Practices](#)
- [AI Learning Resources](#)

8. Reporting

Report any concerns or incidents related to the use of AI Utilities to Forcepoint Information Security and Forcepoint Legal Compliance immediately. This includes potential risks, ethical concerns, or violations of this Policy or applicable laws, regulations or ethical principles.

9. Related Policies

Other policies and procedures may apply to your use and access to Forcepoint Systems and the development, procurement, use, distribution, and deployment of software (including software that uses AI Utilities). To the extent that there is a conflict with such policies, this Policy supersedes those policies.
